Animal Adaptation Diorama

Create a diorama featuring the animal that you created last week on the previous worksheet.

Your diorama should be about the size of a shoebox, and can include whatever you need to create the habitat of your animal. Go for a walk in nature and find any supplies you may need to create the environment that your animal would live in.

Try to include a model of your animal. For this, you could use a toy animal that you already have (with some modifications), or make a completely new animal using materials that you have around your house.

Things to consider:

- Where does your animal live?
- How has your animal adapted to survive in its specific environment?
- What kind of shelter does your animal live in?
- What does your animal eat? Is it a herbivore, carnivore, or omnivore?
- Is it a predator or prey? Does it eat other animals that you could include? What other animals eat it?

Plan your diorama in the space below.

If you cannot build the diorama, create a detailed, coloured illustration showing your animal and how it has adapted to its specific environment.
