 - 4 arms / 4 fingers per hand

- No legs
 - wheelish ^{hairs} ^{roll over}
 body - rocks
 - holes through
 upper/lower ^{let}
 body ^{wind}
 - t-shirt

Appearance

The Zurgles are found in the Venon galaxy, 300 light years from Earth. Their planet is called Seporia, and it is a very turbulent planet. The Zurgles have evolved to adapt to the harshness of the planet. They have huge holes through their upper and lower bodies which allow the strong winds of Seporia to pass easily through them. As well, instead of legs the Zurgles have a rotating, wheel-like lower body, which easily rolls over rocks and any other obstacles which may be in their way. The Zurgles are very strong and can lift heavy objects because of their 4 arms. The Zurgles have no ears but are able to hear extremely well through their hair. If you ever see a Zurgle make sure that you compliment them on their beautiful blue skin because they are extremely proud of it.
